

Sardinia is in danger because of the fires that happen too often, we want green soil, not black

Monte Longu

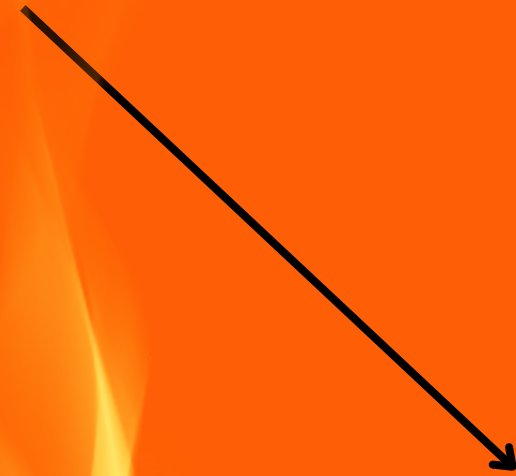

A solution must be found as soon as possible!

**houses completely
burned**
burned countryside

Tepilova on fire

For these fires, even
avoidable ones, we
have solutions

palisades and pilings

These are solutions that we propose for when after fires it rains a lot, rivers overflow, water comes out and takes away the surface soil

And this is an example of drywall

images of protected areas with fires that have overwhelmed and ruined them even from the surrounding areas

instead this is a more precise image with circles of protected areas
